hmin44851@gmail.com

PROFESSIONAL SUMMARY:

I am an undergraduate student majoring in **Digital and Communication Engineering** at Mae Fah Luang University with a strong passion for Cloud Engineering and cloud-based system design. I am actively developing hands-on experience with cloud platforms such as AWS and Huawei Cloud, along with a solid understanding of core cloud computing concepts including scalability, infrastructure design, and cloud services. I am also familiar with programming languages such as Python and C#, which I use to build and support technical solutions. I am eager to contribute to cloud infrastructure and solution development while gaining real-world experience in a collaborative and fast-paced engineering environment.

EDUCATION:

MAE FAH LUANG UNIVERSITY

| 2023 - PRESENT

- Major in Digital and Communication Engineering
- Senior Projects in Queue Management System

Throughout my academic career at Mae Fah Luang University, I have undertaken coursework in cloud computing, blockchain technology, communication technology, cybersecurity, Internet of Things (IoT), and electronic circuit analysis.

NATIONAL CYBER CITY

| 2025 - PRESENT

- Diploma in Python Programming

I am pursuing a Diploma in Python Programming, building skills in scripting, data processing, and automation that support analytical tasks and cloud-based solutions.

SKILLS AND INTERESTS:

- | | | |
|------------------|----------------|-------------------------|
| • Python | • AWS | • Solution Architecture |
| • C# | • Huawei Cloud | • Unity |
| • Git and GitHub | • Firebase | • Arduino |
| • MySQL | • Linux | • Raspberry Pi |
| • MongoDB | • REST APIs | • IoT |

PROJECTS:

AR-POWERED INTERIOR DESIGN PROJECT

[CHECK HERE FOR THE PROJECT](#)

This project was developed as part of Hylife Excellence Innovation 2025 competition, focusing on both technical feasibility and business viability.

- I Independently completed the entire business component, including market research, Business value proposition, Trend Analysis, and target customer analysis.
- Performed competitive and market analysis to evaluate commercial potential and scalability.

- Collaborated with the technical team by translating business requirements into system design considerations.
- Presented the business model and solution strategy to executive-level judges.
- Achieved Top 5 placement at Executive Innovation Hylife 2025.

QUEUE MANAGEMENT SYSTEM (SENIOR PROJECT)

[CHECK HERE FOR THE PROJECT](#)

Developed a Queue Management System as a senior project to improve service efficiency and reduce customer waiting time through system analysis and cloud-ready design.

- Designed and developing a Queue Management System to optimize customer flow and reduce waiting time in service environments.
- Analyzed system requirements and user workflows to define functional and technical specifications.
- Evaluated system performance and identified opportunities for process improvement.
- Strengthened problem-solving, system analysis, and cross-functional collaboration skill.

Interface: Mobile Application with ReactNative and NativeWind CSS

- Backend: Node.js, Express.js
- Database: MongoDB
- Cloud Hosting: AWS, Firebase
- Tools: Git, VS Code

LICENSE PLATE RECONGNITION

[CHECK HERE FOR THE PROJECT](#)

Developed license plate recognition system to automatically detect and recognize vehicle license plates using computer vision and OCR techniques. The project involved analyzing system requirements, implementing image processing and detection algorithms in Python, and extracting structured data from recognized plates to support efficient identification and decision-making. This project strengthened my problem-solving abilities, analytical thinking, and practical Python development skills.

- Programming: Python
- Interface: StreamLit
- Computer Vision: OpenCV
- Machine Learning / OCR: Tesseract OCR

AI SONG LYRICS GENERATOR

[CHECK HERE FOR THE PROJECT](#)

Developed an AI-powered song lyrics generator using Python and GroqCloud, enabling users to generate creative lyrics based on prompts and themes. The project focused on integrating an AI model through APIs, handling user input, and processing text outputs programmatically. This work demonstrates practical experience with Python, AI application integration, and analytical thinking in building user-oriented solutions.

- Programming: Python
- AI Platform: GroqCloud (LLM API)

AMIGO APP – AI TRAVEL PLANNER (GEMINI API)

[CHECK HERE FOR THE PROJECT](#)

Developed Amigo, an AI-powered mobile travel planning application that generates personalized travel itineraries based on user preferences. The project focused on integrating the Gemini API to process user input and generate intelligent travel recommendations. Built as a cross-platform mobile app using React Native, with a clean and responsive UI designed using NativeWindCSS. This project demonstrates experience in AI API integration, mobile application development, and user-centric design.

- Mobile Framework: React Native and NativeWind CSS for Styling
- AI Platform: Gemini API
- Application Logic: Prompt design and response handling
- Tools: VS Code, Git

CERTIFICATIONS:

- HCIA (Huawei Certified ICT Associate) Cloud Service Certificate - Huawei Cloud
- HCIA (Huawei Certified ICT Associate) IoT - Huawei Cloud
- HCCDP (Huawei Developer Certification) GaussDB - Huawei Cloud
- HCCDP (huawei Developer Certification) Solution Architecture - Huawei Cloud
- Cybersecurity Foundations - Palo Alto
- Fundamentals of Digital Marketing - Google Skill Shop
- Foundations of CyberSecurity - Google
- Google Cloud Computing Foundations - Google Cloud

Completed 4+ additional certifications in Huawei Cloud, 6+ Certifications in cybersecurity, AI and Gamification.

ARCHIEVEMENTS:

Top 5 Finalist, Executive Innovation Hylife 2025

- Recognized for outstanding business strategy, market analysis, and executive-level presentation for an AR-powered interior design solution.
- Solely responsible for business planning and commercialization strategy in a multidisciplinary innovation project.

Huawei ICT Competiiton National Round First Runner-up 2025

- Achieved second place at the national round, demonstrating strong technical knowledge, and teamwork in ICT-related challenges.

Shortlisted in Gosoft Retail Hackathon 2026

- Shortlisted in Gosoft Hackathon 2026 among over 500 submissions across 12 countries for the next generation retail transform track.
